

eTrust™ InoculateIT®

Managing eBusiness Security

Workgroup Edition
Advanced Edition

eTrust InoculateIT is an award-winning antivirus solution, providing superior, realtime, enterprise-wide protection against today's most prevalent security threat—viruses. Unsurpassed management and automated virus signature updates protect today's networks against potentially damaging and costly virus incidents.

eBusiness is at Risk of Infection

As today's eBusinesses extend beyond the traditional enterprise, customers, partners, suppliers and buyers must be assured a safe and trusted environment to process transactions. The increased threat of dangerous viruses, worms and malicious code puts an eBusiness at more risk than ever. Sending and receiving email, sharing files, utilizing online resources and conducting realtime transactions are common activities that can rapidly infect an unprotected environment. Computer virus attacks are responsible for the loss of billions of dollars and countless hours of lost productivity. According to ICSA Labs, computer virus incidents have increased over fifty percent in the last five years. To make matters worse, new threats and their variants are appearing every day.

To secure their infrastructures, organizations need to implement effective network security policies that include an antivirus solution. The ideal antivirus solution must be easy to manage, offer advanced functionality and protect all mission-critical systems.

Superior Virus Protection and Unmatched Manageability

eTrust InoculateIT provides realtime virus protection for the entire enterprise, across all critical systems, by continually detecting and curing potentially damaging viruses. Sophisticated virus-scanning engines from Computer Associates International, Inc. (CA) are at the heart of eTrust InoculateIT. They use advanced techniques to keep eBusinesses safe.

With its unparalleled management features and deployment flexibility, eTrust InoculateIT eases the administration of virus protection. Administrators enjoy the rich features of eTrust InoculateIT, including centralized visualization of all antivirus clients, outbreak alerting and extensive event logging. Automated signature updates

rapidly reach all protected systems, avoiding the damaging spread of new virus threats as they arise in the network. eTrust™ InoculateIT is the solution for complete virus protection.

Easily enforce security policies using the centralized management capabilities of eTrust InoculateIT.

eBusiness Security and Protection Benefits

eTrust InoculateIT enables organizations to confidently deploy network services, providing complete protection against virus attacks. In addition, eTrust InoculateIT:

- **Reduces Risk and Costly Downtime.** eTrust InoculateIT is certified to detect 100% of "in-the-wild" viruses. eTrust InoculateIT prevents virus outbreaks across critical computing assets from causing revenue loss, costly downtime or lost customer confidence.
- **Lowens Cost of Ownership.** eTrust InoculateIT eases virus protection administration with automated maintenance, extensive alerting mechanisms and flexible deployment facilities. Through centrally managed policy enforcement, administrators can prevent dangerous gaps in virus protection.
- **Enables Trusted eBusiness.** A virus-free network enables organizations to confidently embrace Internet resources without the fear of virus threats.

The Right Solution for eBusiness

To address the needs of any IT environment, eTrust InoculateIT is available in various editions.

Computer Associates™

- **eTrust™ Inoculate/IT® Workgroup Edition** is designed for small- to mid-sized organizations and departments within larger environments, delivering out-of-the-box protection.
- **eTrust™ Inoculate/IT® Advanced Edition** is the ideal choice for mid- to large-sized organizations. It provides powerful centralized management functionality, making it easy to protect distributed networks against virus attacks.

Distinctive Features

- **Superior Manageability.** The multi-tiered architecture and hierarchical organization of eTrust Inoculate/IT provides deployment flexibility and powerful management tools to administer antivirus protection. Policy enforcement mechanisms “lock-down” client configurations, averting dangerous gaps in virus protection. Flexible security policies enable the creation of customized configurations within the organization.
- **Multiple Scanning Engine Support.** eTrust Inoculate/IT supports CA's multiple, award-winning scanning engines for comprehensive detection of 100% of “in-the-wild” viruses.
- **Realtime Detection and Automatic System Cure.** eTrust Inoculate/IT provides continual protection through realtime scanning and automatic cure. Special cleaning procedures are included in signature updates, eliminating manual efforts or specialized utilities.
- **Heuristic Virus Detection.** Using an advanced rule-based detection method, eTrust Inoculate/IT detects unknown viruses and variants before they impose damage on the network.
- **Virus Signature Updates.** To protect against the onslaught of new viruses, eTrust Inoculate/IT automatically downloads virus signature updates from the Internet and distributes the files to eTrust Inoculate/IT clients. Backed by CA's eTrust™ Global Antivirus Research Centers, eTrust Inoculate/IT is continually updated when new threats are discovered. Incremental signature updates limit the impact to vital network bandwidth.
- **Centralized Event Logging and Alerting.** A centralized log of all virus events, including files checked, viruses found and

responses taken, helps simplify administration. The eTrust™ Inoculate/IT® Alert Manager notifies administrators of all critical virus incidents from any server in the environment.

- **Directory-Enabled Repository.** The eTrust Inoculate/IT data repository is LDAP-enabled, allowing for complete access and integration with existing technologies.

eTrust™: Managing eBusiness Security

eTrust is CA's family of eBusiness security solutions that proactively secures an organization's heterogeneous IT infrastructure from the browser to the mainframe. Powerful, comprehensive solutions address every security issue, including antivirus, access control, Virtual Private Networks (VPNs), Public Key Infrastructures (PKIs) and intrusion detection. By offering complete security infrastructure management from the IT industry's leading security vendor, eTrust enables trusted eBusiness.

CA also offers an extensive range of services to help an organization accelerate a project's successful completion and increase ROI. Offerings range from initial assessment, product implementation and integration projects, to migration services, premium support offerings and staff education. For more information, visit ca.com/services.

CA Education helps everyone on an implementation team take full advantage of our products' advanced capabilities. Our training methodology parallels business processes with “customizable” content, 24 x 7 delivery from CA classrooms to desktops, and state-of-the-art learning centers. Find out more at ca.com/education.

Supported Environments

- Windows 95/98/Me
- Windows NT/2000/XP
- Various Linux Platforms
- Macintosh
- Novell NetWare 3.x, 4.x, 5.x
- Microsoft Exchange 5.5+/2000
- Lotus Notes/Domino
