- Symantec Backup Exec System Recovery Server Edition Starter Kit
- Symantec Backup Exec 11d for Windows Servers System Recovery Option 7.0 (BE SRO)

## Key Messages

- Recovers complete Windows systems in minutes, not hours or days
- Enhanced Exchange, virtual and data recovery capabilities
- New centralized management
- Now available as an option to Backup Exec for Windows Servers

## What's New and Improved in 7.0?

**Customizable Recovery Disk** – Automatically harvests system drivers not already included on the Symantec Recovery Disk and also allows administrators to add additional drivers for a recovery environment tailored to meet your unique hardware needs.

**Calendar View** – Shows past, present and future recovery points for each volume on the system and the protection level of each.

**Support for VMware ESX Server and Microsoft Virtual Server** – Enables seamless physical to virtual (P2V) and virtual to physical (V2P) conversions for VMware ESX Server, VMware Server, VMware Workstation and Microsoft Virtual Server. Administrators can choose to convert entire systems at once or selective volumes at a time.

**Extended 64-bit support** – Now runs on 64-bit platforms (EM64T, AMD64).

**Support for Microsoft Vista** – Backup Exec System Recovery Desktop Edition now supports Microsoft Vista including hardware independent recovery with our award-winning Restore Anywhere™ technology.

**Google™ Desktop Integration** – allows for familiar rapid search and retrieval of files and folders using a common web-browser interface.

**Dynamic CPU Based Performance Throttling** – improves performance on desktops and servers to utilize resources more efficiently while capturing a recovery point. Also includes support for Dual- and Quad-Core systems.

**File/Folder Backup and Recovery** – allows administrators to backup selective files and folders on a separate schedule from full system recovery points.

**Improved Recovery Point Granularity** – schedule recovery points as often as every 15 minutes thus saving time and reducing disk storage requirements.

**Customizable Event Driven Recovery Points** – allow users to specify which executable(s) or .com files they wish to trigger a new recovery point. This expands on the existing triggers (prior to app. installation, user log on/off, configurable storage utilization changes).

**\*Backup Exec System Recovery Manager** – New centralized management provides simple, at-a-glance management of all backup and recovery processes across your entire organization.

**Backup Exec Retrieve** – Enables end users to recover files and folders without IT intervention through a simple web-based interface (part of Backup Exec System Recovery Manager).

**\*Exchange Retrieve Option** – Enables rapid, granular recovery of Exchange including individual messages, folders, mailboxes and attachments.

\*These products are add-ons to Backup Exec System Recovery core products

## Key Continuing Capabilities

- Captures and protects the entire Windows system including the operating system, applications, databases, files, and settings in one easy-to-manage file, without disrupting user productivity.
- Recovers complete Windows systems in minutes – even from a bare-metal state – without the need to manually reinstall and reconfigure the system
- Restore Anywhere™ capability allows for rapid recovery of an entire system to dissimilar hardware platforms. Also useful for hardware migrations.
- LightsOut Restore for remote system restoration
- Network bandwidth throttling
- Support for Microsoft Active Directory
